The Ultima SV - Intermittent Motion

## IQF Product Line

With its many years of experience in the application of meat, poultry, seafood, pasta, french fries and rolls Hayssen Packaging Technologies delivers the high quality, durability and unsurpassed performance that you should expect from a machine.

Our machines meet the rigid sanitary specifications necessary for the harsh and demanding environment of the IQF industry.

With over 10,000 systems installed throughout the world, Hayssen Packaging Technologies has the experience and the dedicated resources to support you wherever you are located, every day of the year.

Hayssen provides custom packaging solutions to meet your specific industry needs. We offer several options within the **Hayssen Ultima Family (ST, SU, SV, TR)** of vertical form/fill/seal machinery and computer combination net-weight scales — all built specifically for frozen food applications.

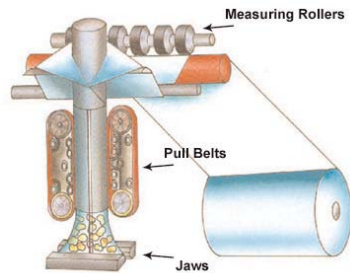

Ultima with Integrated Zipper

## SEVERE SERVICE EXPERIENCE

Hayssen Packaging Technologies engineers and manufactures the most durable, dependable packaging systems in the industry. By designing and using robust, quality components, Hayssen never compromises the longevity and reliability of the performance of Hayssen packaging systems. Hayssen machines have performed reliably for decades in the severe service environments

Only Hayssen provides the rugged reliability and the **total systems support services** to keep you running day in, day out, for the long haul.

Hayssen's patented Measure, Form, Pull system is the fastest, production-proven way to package food.

## ULTIMA TR CONTINUOUS MOTION, POLYETHYLENE PACKAGING

- **Quali-Seal, EZseal and Measure, Form, Pull** combined to give you the highest poly speeds in the business.
- Produces consistent, **high-quality back seals** using servo driven, continuous metal band seal — including a back-off feature — to avoid burn through during product interruption.
- **Intelligent Motion Control** processing adjusts speed to product delivery, reducing film and product waste and downtime.
- **One screen** contains the most frequently used parameters, eliminating the need to search multiple screens for setup.
- **Speeds** may be changed “on the fly” from the touch screen, resulting in less downtime.

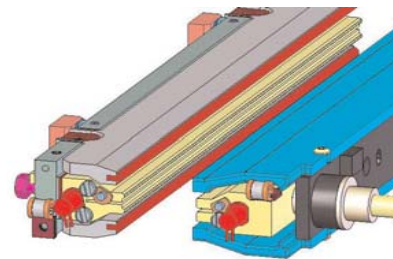

Ultima TR - Continuous Motion

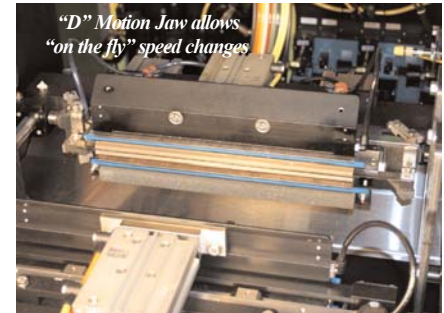

## EZSEAL JAW OPTION

Since the introduction of the **Quali-Seal** and **Measure, Form, Pull** features in 1986, Hayssen has enjoyed the highest speeds and highest seal integrity on polyethylene films in the industry.

Now, **EZseal** adds to the Hayssen advantage with the introduction of tapeless poly-sealing jaws! No taping means less downtime, lower seal temperatures and higher speeds to produce the very best polyethylene seals in the business!

EZseal Sealing System for Polyethylene eliminates the need for tape.

Ultima TR - Backseal Assembly
